MEMORANDUM FOR RECORD

SUBJECT: Read-Out

25X1A

1. [REDACTED] called to explain that he had determined that the method used for AGC level recording had failed to provide satisfactory performance. He recommends that the subcarriers be frequency-modulated rather than amplitude-modulated. He was asked to submit a proposal for approval here before making any changes.

2. He also wanted to devise a new system for photo-identification. The one he has in the present system is "for the birds". He was asked to submit a proposal.

3. I asked him to submit a proposal for R-L indication on Band 1. The requirement was withdrawn about one year ago when R-L antennas were not possible. Antenna advances made on this project now provide a R-L capability, but the R-L circuitry was not installed when the antenna was installed. This should be done. It should be simple compared to the above problems.
